

QUARTZ | CARE & MAINTENANCE

Engineered quartz is a durable, low-porosity surface designed for easy everyday care. Its resin-bound composition makes it different from natural stone and particularly sensitive to excessive heat and certain chemicals.

EVERYDAY CLEANING

- Wipe with a soft cloth or nonabrasive sponge, warm water, and a small amount of mild dish soap.
- Rinse away soap residue and dry with a clean microfiber cloth to minimize streaks.
- Clean spills promptly, especially coffee, wine, oils, dyes, and strongly colored foods.

SPILLS, STAINS & MARKS

- For dried residue, soften with warm soapy water and gently lift with a plastic scraper held flat.
- For stubborn marks, use only a nonabrasive cleaner specifically approved by the quartz manufacturer; test first in an inconspicuous area.
- Avoid aggressive scrubbing, abrasive pads, and prolonged chemical contact.

PROTECTING THE SURFACE

- Always use trivets or heat pads under hot cookware and heat-producing appliances; thermal shock or resin discoloration may be permanent.
- Use cutting boards to protect the finish and avoid dulling knives.
- Avoid prolonged direct sunlight unless the specific product is rated for outdoor/UV exposure.

SEALING & LONG-TERM CARE

Do not apply a stone sealer to engineered quartz unless the product manufacturer expressly directs otherwise. Most engineered quartz surfaces do not require sealing.

DO

- Use mild soap, water, and a soft cloth.
- Use trivets, cutting boards, and coasters.
- Wipe spills promptly and dry after cleaning.

DO NOT

- Do not place hot pans directly on the surface.
- Do not use oven cleaners, paint strippers, strong solvents, or harsh alkaline/acid cleaners.
- Do not use steel wool, abrasive powders, or abrasive pads.

IMPORTANT PRODUCT NOTE

Some quartz finishes, colors, and manufacturers have specific care restrictions. Follow the product-specific manufacturer guidance where available.

General guidance only. Test new products in an inconspicuous area. Follow the slab/product manufacturer, sealer, and installer instructions where applicable. For deep stains, cracks, etching, or finish damage, contact a qualified stone-care professional.
